## (54) Method and apparatus for treatment of cancer using pulsed electromagnetic radiation

The linvention! includes a! method! for! the lhyper $thermid \, treatment \, of \, tumors ! \, including! \, the ! \, steps! \, of ! \, promotion \, the \, including! \, the ! \, steps! \, of ! \, promotion \, the \, including! \, the ! \, steps! \, of ! \, promotion \, the \, including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the including! \, the ! \, steps! \, of ! \, promotion \, the ! \, st$ viding!a!pulsed!radiation!output!from!a!radiation!source; and! directing! said! pulsed! radiation! output! toward! a! tumor.! The! Invention! further! includes! an! apparatus! for! use in!the!treatment!of!tumors!having!a!radiation!source!(14) adapted! to! produce! broad-band! pulsed! radiation! output at least in the visible and near-infrared range of wave-

lengths,!a!delivery!system!proximal!to!the!radiation source! and! adapted! to! focus! and! direct! the! pulsed! radiation! output! to! a! dermal! treatment! site,! and! a! filtering system! adapted! to! restrict! the! pulsed! radiation! output! to bands! in! the! visible! and! near-infrared! range! of! wavelengths.! In! particular! the! radiation! source! Is! adapted! to produce! pulsed! radiation! output! over! a! continuous! band of!wavelengths!between!600!nm!and!1000!nm.

## Description

This! Invention! relates! to! an! apparatus! and! method for! the! treatment! of! tumors.! More! particularly,! the! Invention! relates! to! an! apparatus! for! the! irradiation! of! shallow tumors! with! pulsed! electromagnetic! radiation.

Several! non-surgical! methods! are! available! for treatment of! cancer,! but all! of! them! have! disadvantages. Chemical! therapy! and! photodynamid therapy! are! accompanied! by! the! Introduction! of! altoxic agent! into! the body.! Electromagnetic! radiation! therapy! using! X-rays causes! the! destruction! of! healthy! tissue! due! to! X-rays ability! to! penetrate! deeply! Into! human! tissue.

Motherl method, I called hyperthermia, I isl used for tumor necrosis both! by litself, I and I ind combination! with other methods of cancert treatment! The I basic purpose of hyperthermia! isl to! raisel tumor! temperature! substantially above! body! normal! temperature, I to! al temperature! at which! tumor! cells! are! killed.! The selectivity! of! hyperthermic! therapeutic methods! are! the! extent! to! which! the tumors! and! not! the! surrounding! healthy! tissue! isl destroyed.! Hyperthermic! treatments! have! been employed foil both! whole! body! heating! and! foil local! heating! of! tumors.! Local! hyperthermial! typically! uses! sources! of! electromagnetic! radiation.! focused! on! the! tumor! at! frequencies! that! will! heat! tumor! uses! and! not! the! surrounding healthy! tissue.! Microwave,! visible! and! infrared! frequency! ranges! are! commonly! employed! foi! this! purpose.

Current hyperthermict methods have I significant disadvantages. I Treatment timest are loften long. I on! the I ordert off and hour. I Furthermore, I the I selectivity off the I radiation! is I low, I causing! necrosist not only off tumort tissue, I but off the I healthy! surrounding tissue! as! well.

Hyperthermial treatments! using! microwave! radiation! sources! (typically! radiating! at about 1915! MHz]! have the! disadvantage! of! deep! non-tunable! penetration! (several! centimeters)! Into! the! body! as! we!! as! problems! with focusing! which! cause!! ow! selectivty.

Nd:YAG! laser! radiation! sources! are! used! both! by themselves! and! inf combination! with! photodynamic! therapy.! One! disadvantage of Nd:YAG! laser! when! used! for hyperthermia! is! its! small! spot! size,! on! the! order of 5lmm. Al radiation! source! this! small! sonot! easily! heat! large tumors,! which! may! have! a! projected! area of several square! centimeters! on! the! skin,! resulting! in! extended treatment! times.! In! addition,! the! Nd:YAG! laser! has! other limitations! relating! to! their continuous! wave! (CW)! operating! mode,! and! with! their! limited! tunable! range.!! tis clear! that! an! improved! apparatus! and! method! for! hyperthermia! tumor! treatment! is! desirable.

Pulsed! radiation! of! altumor! using! a! light! source would! cause! more! efficient! hyperthermla! and! necrosis than! current! methods! provide.! Furthermore,! a! radiation source! capable! of! heating! tissue! in! a! short! time! Interval, preferably! between! 4!! and! 45! degrees! C.! would! reduce thelt reatment! times! current!y! required.! Providing! a! radiation! source! with! a! broad! controllable! spectrum! of! radiation! In! the! visible! and! nea! infrared! regions! would! allow

the! penetration! depth! and! the! selectivity! of! the! treatment to!be! more! accurately! controlled.

The!present!Invention!is!directed!to!a!method!for the! hyperthermic! treatment! of! tumors! with! electromagnetic! radiation! including! the! steps! of! providing! a! pulsed radiation!output!from!a!radiation!source!and!directing said pulsed radiation output toward at umor. The radiation may!be!developed!over!at!least!one!continuous band!of!wavelengths.!or!be!generated!in!the!visble!and near-Infrared! band.! possibly! in! a! continuous! band! between! 600! and! 1000! nm.! In! one! embodiment,! it! may! include! the! step! of! transmitting! a! broad! radiation! beam! to al pigmented!tumor,!which!might! have! al cross-sectional areal of between 10.81 cm2 and 15001 cm2. In lanother embodiment,!it!is!possible!to!control!the!pulse-width!of!the pulsed!radiation!output,!focus!the!radiation!source!for controlling! the! power! density! of! the! pulsed! radiation! output, ! or! filter! and! control! the! spectrum! of! the! pulsed! radiation!output.!In!particular.!one!may!focus!the!pulsed radiation! output to a beam! having a cross-sectional area oftgreated than 10.81 cm<sup>2</sup>. Alternatively lone may cut off the! UV! portion! of! the! spectrum.! A! pulse! width! In! the rangel of about 100 microseconds to 50 milliseconds may be!provided, particularly, one having!an energy density!at!the!treatment!area!of!at!least!0.2!W/cm2. Altematively, ! energy! densities! of! greater! than! 90! J/cm2 120! J/cm<sup>2</sup> per!treatment!may be provided at the!treatment! site.! A! pulse! delay of greater! than! 100! milliseconds or!less!than! 100! seconds may! also be provided.

In! another embodiment of the Invention ! an! apparatus!for!the!treatment!of!tumors!is!provided.!including al radiation! source! producing! pulsed! radiation! at! least! in the! visible! and! near-infrared! wavelengths.!a! delivery system!near!the!radiation!source!for!focusing!and!directinglthe!radiation!to!a!treatment!site.!and!a!filtering!system! restricting! the! radiation! to! visible! and! near-infrared wavelengths.! Alternatively,! the! radiation! source! may produce! pulsed! radiation! In! a! broad! band,! or! over! at least one!continuous!range!of!wayelengths.!This!may belfocused in albeam of at least 0.8 an t. The radiation may! be! restricted! to! a! band! between! 300! and! 1000! nm. orl may! be! UV! blocked! by! a! filter.! The! radiation! pulses may! have! a! duration! of! between! 100! usecs! and! 100 msecs.land!may!be!spaced!from!100!msecs!to!100!secs apart.! In! addition,! they! may! be! delivered! to! the! treatment areal with! a! radiation! density! of! greater! than! 0.2! W/cm 2 90! J/cm2, or! 120! J/cm2. The radiation! may! also! be! limited!to! a! radiation! density! of! less! than! 200! J/cm 2

Other! principal! features! and advantages! of! the! invention! will! become! apparent! to! those! skilled! in! the! art upon! review! of! the! following! drawings,! the! detailed! description! and! the appended claims.

The! present invention! will!now! be! described,! by! way of! example! only,! with! reference! to! the! accompanying drawings,! in! which:-

FIGURE! 1! Isl algraph! of radiation! tissue! penetration versus! radiation! wavelength;

FIGURE 2! Isla! cross-sectional! view off tumor! treatment device according! to! the present! Invention;! and FIGURE 3!sla! graph! off treatment! results! using! the FIGURE 2! tumor! treatment! device.

Beforel explaining lattleast one embodiment of the Invention in I detail it list to be understood that the Invention is not limited lin! list application! to! the! details! of construction! and! the! arrangement off the! components! set forth! In the! following! description! of illustrated! in! the! drawings. The! invention! is! capable! of! other embodiments or! being practiced! of carried! out! in! various! ways.! Also,! it! is! to! be understood! that the phraseology and terminology employed! here in! is! forthe! purpose! of! description! and should! not be! regarded! as! limiting.

The! present invention! is! directed! to! a! method! and apparatus!for!treating!shallow!tumors!using!pulsed!radiation.!Treatmentloflsuch!tumors!is!problematic,!since the!outer!layers!of!skin!must!be penetrated and!not harmed,! yet! the! radiation! must! get! to! the! underlying! tumorous! growth! sufficient! to! heat! the! tumor! and! cause necrosis.!The!'effective!penetration!depth , d,!of!radiation! Isla! measure! of! the! radiation's! ability! to penetrate the! skin! and! affect! an! underlying! tumor.! It! is! defined herein! as! the! depth! below! the! surface! of! the! skin! at 25 which! the! radiation! fluence! reaches! 1/e! times! the! mag $nitude! of! the! \ radiation! \ nuance! on! the! \ surface! of! the! \ skin.$ Since! the! effective! penetration! depth! varies! with! the wavelengthloflthelimpinginglradiation, !tumorslatlalparticular!depth!can!be!targeted,!and!the!overlying!skin!preserved,! by! selecting! and! applying! particular! wavelengths!of!radiation!for!tumors!at!a!particular!depth.

The leffective legenetration loepth loan loe lestimated by lusing the leffective lattenuation looe fficient,  $p_{\rm e}$ n, loff the dermis, lwhich latkes lintol account the locattering and labsorption loff light in tissue. If the leflation loff the leffective penetration loepth lot the leffective lattenuation loe efficient can be lestimated as:

Following! Jacques! (S.L.! Jacques.! Role! of! Skin! Optics! in! Diagnostic! and! Therapeutic! Uses! of! Lasers.! 'Lasers! and! Dermatology', Springer-Verlag.! 1991.! pp. 45-21).! the! effective! attenuation! coefficient! of! the! dermis can be! expressed! as! follows:

$$\mu_{\text{off}} = (^3 f^{\text{I}}_{\text{e}(Pa + \mu \text{stt-g})))a,$$

where

firt = attenuation! coefficient! of! dermis

μa = absorption! coefficient! of! dermis

ν. = scattering! coefficient! of! dermis,! and

9= thelanisotropy! factor,! defined! as! thelaverage cosine! of! the! scattering! angle! for! one! scattering!

Inglevent.

Using!the!above!coefficients!and!factor,!alchart!has been! made! of! the! effective! penetration! depth! In! centimeters!versus!the!wavelength!of!electromagnetid.radiation! impinging! upon! the! skin.! This! chart! Is! illustrated! In FIGURE! 1! As! FIGURE! 1! discloses,! the! effective! penetration!depth!increases!with!increasing!wavelength,!and for wavelengths! between! 400! nm! and! 1000! nm! varies between!0.03!cm!and!0.25!cm.!Radiation!can penetrate as! deeply! as! 2! mm! with! a! radiation! wavelength! of! B00 nm.! The! sensitivity! of! effective! penetration! depth! to wavelength! Is! clear! from! this! chart.! For! example.! d doubles! when! the! wavelength! of! the! Impinging! radiation! increases! by!a! mere! 20% (500! to! 600 nm). Because! varying! the! applied! radiation! wavelength! varies! the! depth of! penetration! of! that! radiation,! one! can! control! treatment! depth! by! controlling! the! radiation! wavelength.

Hyperthermicl treatments! also depend upon! the length! of! time! radiation! Is! applied! to! the! surface! of! the skin.! The! effective! depth! of! tissue! heating! based! on! heat conducted! from! the! surface! depends! upon! the! conductivity! of! the! skin.! The! time!t, required! fora! heat! wave to penetrate to! al! depth! d, below! the! surface of the skin! can be! expressed! as:

t=d2/a,

where:

a!=!the!diffusivity!of!the!skin!(approximately!3x10-<sup>7</sup> m<sup>2</sup>sec<sup>-1</sup>).

Thus, I the! depth! of! penetration! can! be! controlled! by! controlling! the! time! interval! over! which! radiation! is! applied to! the! surface! of! the! skin.! For! example,! conducting! heat from! the! surface! of! alskin! throughout! a! shallow! tumor with! a! thickness! of! about! 1! cm! requires! about! a! 5! minute application! of! radiation! to! the! surface! of! the! skin.

Theseltwo!modes! of! heating:! conduction! from! the surface! of! the! skin,! and radiant! penetration,! can! be! tailored! to! specific! tumors! by! varying! the! wavelength! and the! bulse! duration.

Al major! limitation! to! the! use! of! radiation! sources! for the rapeutic! treatment is! the! potential! tissue! damage.! In order! to! radiate! the! tumor! with! the! optimum! wavelengths of! radiation! ye!! no!! bum! tissue,! a! radiation! source! is! preferably! pulsed.! the reby! providing! radiation! a!! wavelengths! sufficien!! to! penetrate! the! tumor! to! an! optimum depth.! ye!! limiting! the! average! energy! density! during! a treatmen!! and! preventing! the! upper! layers! of! the! tumor from! being overheated.

To! provide! for! the! treatment! of! a! wide! range! of! shallow! tumors.! the preferred!energy density per pulse! Is between 0.1! and! 10! Joules persquare centimeter! of! tumorlarea.! These! pulses! are preferably! repeated at latrate of! between! 0.1! and! 1! Hertz.! The! number! of! pulses! for treating! shallow! tumors! preferably! ranges! between! 1 and! 1000! pulses.! To! treat! a! wide! range! of! tumor! sizes, the! radiation! should! be! applied! to! an! area! of! the! skin ranging! from! 0.8! cm<sup>2</sup> to! 500! cm<sup>2</sup>.

Itt is clearl from! FIGURE! 1! that! by! Irradiating! altumor with! selected bands! of! radiation! in! the! visible! and! near Infrared! regions.! the! tumor! can be! penetrated to aldepth of! between! 0.05 and! 0.25! cm! and hyperthermically treated.! FIGURE! 2! Illustrates! just! such! altumor! treatment! apparatus! 10.! having! alhousing! 12! that! encloses! al radiation! source! 14.! and! a! reflector! 16.! and! having! an! opening! with! al set! of! optical! filters! 18.20.! and! a delivery system 22. A processor! 24 is provided to control! radiation source! 14! through! lamp! driver! circuit! 26.! under! the! control! of! al program! in! memory! 28.

Radiation!source! 14! isla!flashlamp!such!as!a!gas filled!linear!flashlamp!Mode!!No.!L5568!available!from ILC!Typically,!a!flashlamp!slenergy!islemitted!aslbroadband!incoherent!energy!in!the!300! to! 1000! nm!wavelength!range,!which,!as!FIGURE!1!shows,!islwell-suited to!penetrating!tissue!to!aldepth!of!several!millimeters, and!thus,!foftreating!shallow!tumors.

Tottreatla!tumor, the Iradiation! must belfocused and delivered tot the Ireatment site, I and thus I reflector! 16! and delivery! system! 22! are! provided.! Reflector! 16! gathers the! radiation! and! directs! it! toward! an! opening! in! the housing.! To leffectively! reflect radiation! in! the! 300! to 1000! nm! band,! reflector! 16! is! preferably! metallic,! typically! aluminum! which! is! easily! machinable! and! polishable.! and! has! at very! high! reflectivity! In! the! visible! and near! infrared! ranges! of! the! spectrum.! Other! bare! or coated! metals! can! also! be! used! for! this! purpose.

Optical fitters! 18! and! neutral! density! filters! 20! are mounted! inhousing! 12! and! may! be! moved! into! the! beam of out of the! beam't of contro! the! spectrum! and! intensity of the! light.! The! optical! filters! may! include! bandwidth! and low! cutofff filters! in! the! visible! and! infrared! portions! of the spectrum.! To! limit! skin! damage.! it! is! desirable! to! employ UV! filters! to! block! the! UV! portion! of! the! spectrum.! in! particular, UV! fitters! that! cut! off! the! spectral! range! below 510! nm.! For! deeper! penetration! it! is! preferable! to! use narrower! bandwidth! filters.! Optical! bandwidth! filters! and the! cutoff! filters! with! varying! degrees! of! filtration! can be! used! to! reduce! the! total! fluence! transmitted! to! the skin! by! blocking! the! transmission! of! radiation! emitted! by the! radiation! source! to! the! treatment! site.

The! radiation! is! delivered! to! the! treatment! site! by delivery! system! 22,! typically! an! optical! fiber! or! a! quartz light! guide,! although! it! may be! preferable! to! emit! light directly! from! an! opening! it! he! housing! The! delivery system! should! produce! fluences! on! the! skin! of! between 100! mJ/cm² to! 10J.J/cm²

Radiation!source! 14!is!pulsed!to!provide!control!of thettota!fluence,land!thus!control!of!tumot|and!skin!heating!!To!vary!the!fluence,lthe!delay!interval!between!pulses!may!be!increased!or!decreased, preferably overla range!of!a!hundred!milliseconds!to!tens!of!seconds!!n

this! manner,! the! tumor! can! be! heated! at! at! rate! sufficient to! allow! skin! penetration! and! tumor! necrosis.! yet! not overheat! tissue!. Total! fluence! can! also! be! controlled! by varying! the! duration! of! each! pulse! over! al! range! of! between! al hundred! microseconds! and! tens! of! milliseconds,! to! vary! the! fluence! per! pulse! from! al! hundred! milliJoules! to! to! Joules! using! af! flashtube.! Total! fluence can! also! be! modified! by! varying! the! energy! per! pulse.

Effectivel penetration I depthI isI dependent on the wavelength! of! radiation! received! at! the! surface! of! the skin.! The present! Invention! provides for! changes! in wavelength! in! several! ways! Filter! 18! can! be! a! low-pass or! band-pass! filter,! thereby! blocking! selected! wavelengths! of! light.! Varying! the! power! per! pulse! will! also vary! the! emission! spectrum! of! the! radiation! source! as well.

Processor!24! Isl provided! to! control! the! energy! per pulse.! the! pulse! repetition! rate.! pulse! duration! rate! and the! number! of! pulses! per! a! single! treatment,! It! is! connetted! to! radiation! source! 14! through! a! lamp! driver! circuit! 26.! which! is! capable! of! generating! power! sufficient to! trigger! radiation! source! 14.! Processor! 24 operates under! the! control! of! a! program stored in memory! circuit 28

The!presentlinvention is well! suited! to! treating! tumors! with! al wide! variety! of! sizes.!For! smaller! tumors.! a fiber! optic! delivery! system! is appropriate. By! directing the! radiation! through! al fiber! to! the! treatment site.] small tumors! typically! on! the! order! of! al millimeter! of! large! In breadth! can! be! treated! without! endangering! the! surrounding! tissue! Le arge! tumors,! typically! on! the! order! of several! square! centimeters! in! projected! area,! can! be treated! using! al delivery! system,! that! focuses! and! applies! the! radiation! to! al wider! treatment! site.! preferably radiating! a! 0.8! cm² area! of! the! treatment! site! of! larger. By! applying! the! radiation! ove! al large! area.! for! example 500! cm².! even! heating! of! large! tumors! can! be! achieved, reducing! the! chance! of! uneven! tumor! treatment! and! the risk! of! damaging! tissue.

The! present invention! has! been! tested! in! animal! trials! and! is! effective! for! the! treatment! of! tumors.! FIGURE 3! illustrates! the! inhibition! of! melanoma! B16! growth! in mice! after! irradiation! in! accordance! with! this! invention. The!FIGURE!3! chart! compares! tumor! volume! versus 90! J/cm<sup>2</sup>:land: 120! J/cm<sup>2</sup>! Irradiation! levels! of! 90! J/cm<sup>2</sup> clearly and significant! time! for! three! irradiation! levels ! a! control! level! (0! J/cm 2 clearly! and! significantly! delay! tumor! growth,! and! an! irradiation level of 120 J/cm<sup>2</sup> causes the affected tumor to!shrink!in!size.!Extrapolating!from!these!tests,!irradiation!levels!of!200!J/cm² are believed!to!provide therapeuticlresults.!The!tumor!treatment!apparatus!in!these testslapplied! broad-band! radiation! in! the! band! from! 600 nm!to! 1000! nm!to! the! tumor.! No! apparent! tumor! responsel was! observed! for! average! radiation! power! densities!below!0.2!W/cm2

Thus,!it!should! be! apparent! that! there! has! been! provided! in! accordance! with! the! present! invention! a! method and! apparatus! for! the! hyperthermic! treatment! of! tumors

that sully satisfies the objectives and advantages set forth above. Although the invention has been **described** in conjunction with specific embodiments thereof, It -is evident that many alternatives, modifications and variations will be apparent to those skilled in the art. Accord-Ingly, it Is intended to embrace all such alternatives, modifications and variations that fall within the spirit and broad scope of the appended claims.

7

and 50 seconds.

10. The use of apparatus accordingto any one of claims 1 to 9 in a method of treatment of tumors.

## Claims

- An apparatus for the hypertherrnic treatment of tumors comprising: a radiation source (14) adapted to produce pulsed radiation output over a continuous band of wavelengths between 600 nm and 1000 nm at least in the visible and near-infrared at an intensity sufficient to cause tumor necrosis; and a delivery system proximal to the radiation source and adapted to direct the pulsed radiation output to a dermal treatment site.
- An apparatus as claimed in claim 1, further comprising a filtering system adapted to restrict the pulsed radiation output to bands in the visible and near-Infrared range of wavelengths.
- An apparatus as claimed in claims 1 or 2 wherein
  the delivery system is adapted to direct the pulsed
  radiation output to a beam having a cross-sectional
  area at a treatment site of at least 0.8cm<sup>2</sup>.
- An apparatus as claimed in claims 2 or 3 wherein the filtering system includes a fitter adapted to block UV wavelengths.
- 5. An apparatus as claimed in any one of claims 1 to 4 wherein the delivery system Is adapted to del ver the pulsed radiation output to the treatment area with a radiation density of greater then 0.2 W/cm².
- An apparatus as claimed in any one of claims 1 to 5 wherein the delivery system is adapted to deliver the pulsed radiation output to the treatment site with a radiation density of greater than 90 J/cm<sup>2</sup>.
- An apparatus as claimed in any one of claims 1 to 5 wherein the delivery system is adapted to deliver pulsed radiation output to the treatment site with a radiation density of greater than 120 J/cm<sup>2</sup>.
- An apparatus as claimed in any one of claims 1 to
   further including a processor adapted to control
  the pulse duration and pulse delay.
- An apparatus as claimed in any one of claims 1 to 8 wherein the pulsed radiation source is adapted to provide a pulse delay of between 100 milliseconds
